REVOLVE ENVI™ 600 SYSTEM

DEVICE COMPONENTS

- Vacuum Tubing
- Lactated Ringer’s (LR) Tubing
- Syringe Adapter
- Temperature Strip
- Catheter Tip Syringe
- Toomey Syringe
- Luer Lock Syringe
- Waste Canister
- Liposuction Tubing and Cannula
- LR Solution

USER-PROVIDED COMPONENTS

- Liposuction Tubing and Cannula
- LR Solution
- Waste Canister
- Luer Lock Syringe

EXTRACTION

- Turn handle clockwise in quarter turns to maximize graft retrieval
- If residual graft is present in device basket, select WASH, add small amount of LR solution, and gently swirl
- Transfer graft from extraction syringe to injection syringe by using provided syringe adapter

WASHING

- Ensure LR solution is at appropriate temperature (37º to 39ºC) by applying temperature strip to LR bag after warming
- Elevate warm LR solution bag relative to device for optimum wash/fill rate
- Use clamp provided on LR tubing to regulate desired volume of LR solution. Note: Device has built-in LR overflow prevention

USEFUL TIPS

CONNECTED COLOR END TO MATCHING PORT
- Ensure LR solution is at appropriate temperature (37º to 39ºC) by applying temperature strip to LR bag after warming
- Elevate warm LR solution bag relative to device for optimum wash/fill rate
- Use clamp provided on LR tubing to regulate desired volume of LR solution. Note: Device has built-in LR overflow prevention

DEVICE SETUP

- Connect colored tube ends with matching colored ports

HARVEST

- Confirm extraction port is closed. Move selector to HARVEST to collect liposaprate into the device

Selector Position
(A) Begin fill: spike warm LR bag, move selector to WASH and open pinch clamp to add warm LR. (B) Continue fill and stir; while adding LR, rotate handle clockwise until the amount of LR approximately equals the amount of tissue.

Move selector to DRAIN to suction fluid from canister. After last wash, leave selector on DRAIN to achieve desired aqueous content (~90 seconds).

Move selector to EXTRACT, insert catheter tip or Toomey syringe tip into extraction port, and extract tissue.

Perform WASH/DRAIN steps at least 3 times.
